CDNA was synthesized from oligo dT-selected mRNA by parining with dT-tailed vector. The dT-tailed vector was adjusted to have about 60nt. The CDNA vector was circularized with B. coli DNA ligase after digestion of BCORI which site is also included in vector. An RNA strand converted to a DNA strand by Okayama-Berg method. The obtained cDNA vectors were used for transformation of competent cells B. coli Topilof' by electroporation method. The CDNA libraries constructed by this method are full-length enriched cDNA library."

Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSDORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen. This sequence belongs to sequence cluster
